Summitek Instruments, Inc. adds new Drive Test Capabilities to the OASIS Spectrum Monitoring Software

Latest version of OASIS includes new features and options which further enhance the capabilities of spectrum analyzers for Public Safety interference support.

Englewood, CO January 22, 2009. Summitek Instruments, Inc. released a new version of their OASIS Spectrum Monitoring & Interference Analysis software. OASIS version 3.1 enhances the Drive Test utility and several instrument drivers to capture Channel Power measurements in addition to the existing Signal Strength measurement ability. Using a standard spectrum analyzer, OASIS and a GPS, Signal Strength or Channel Power can be plotted versus position on a map or exported to common mapping software. This enables Public Safety, cellular and other wireless operators to verify system coverage and to provide the critical measurements & information required to ensure interoperability between agencies or support FCC interference filings.

Along with these features, OASIS v3.1 adds new instrument drivers and continues support for the latest analyzers from Agilent, Anritsu, Rohde & Schwarz, Willtek and more. Follow the link for a complete list of [supported instruments](#), and for instruments that are not listed please contact Summitek Instruments directly. OASIS benefits a wide variety of existing and emerging issues, technologies and applications including military, broadband over power lines, patient monitoring systems, homeland security, public safety interoperability, efficient spectrum utilization and more. These new features and options are available now in OASIS version 3.1.

About Summitek Instruments

Summitek Instruments, the industry leader in Passive Intermodulation Analyzers, offers a wide variety of solutions for making this difficult measurement. As wireless networks focus on quality of service to minimize churn, passive intermodulation has become a critical parameter in base station design and construction. Offering a full range of bench top and portable systems, Summitek Instruments enables users to thoroughly evaluate their products from the development phase through production level testing as well as to improve network performance and certify construction quality of the base station itself.

Summitek Instruments also offers a complete line of spectrum monitoring and interference mitigation tools for wireless providers and spectrum users alike with their OASIS family of products. The Spartan S-parameter measurement software provides manufacturers of components an automated test & data management solution to reduce costs, improve operational efficiencies, increase data quality, and allows enterprise-wide access to data for identification and evaluation of variables that directly impact the business.

Summitek Instruments is a Smiths Group business operating within the Interconnect Wireless Technologies Group.
